Program at-a-glance

Mabel Hoggard received a national top elementary school magnet award, sponsored by Magnet Schools of America. Mabel Hoggard Math and Science Magnet has the distinction of being the first elementary magnet school established in Las Vegas. At Hoggard, students participate in a rigorous academic curriculum with an emphasis on science, mathematics, and technology. They are taught the art of scientific investigation and mathematical problem-solving, utilizing computer technology to support their educational program. The curriculum is highly motivational, with extensive "hands on" math and science experiences. Students receive extended programs and activities through "explorations" in art, music, and physical education classes as well as the school's many outdoor and indoor lab programs. Hoggard teachers have extensive training in math and science education and incorporate state-of-the-art teaching and learning strategies into daily instruction. Mabel Hoggard is committed to the success of all children in the program by creating an optimal learning environment that will help them succeed in the 21st century.
