- Competitive athletic sport teams including Football, Basketball, Tennis, Volleyball, Baseball, Track, Cross Country, and Soccer with numerous teams making playoffs
- Highly engaging fine arts program: guitar, band, choir, and drama programs available; 4 straight titles in guitar performance

### Program at- a-glance

*The Mojave High School Select Schools program is a best-kept secret in North Las Vegas featuring six distinct CTE pathways with top-notch facilities on a comprehensive campus (full activities and athletics offerings) and expanded transportation zone. Within the Mojave Medical Academy, students learn Sports Medicine and Medical Assisting in state-of-the-art medical facilities on campus. In addition, we have formal partnerships with the UNLV School of Medicine, the College of Southern Nevada (including dual enrollment), and the Veterans Administration Hospital. Well-qualified instructors design hands-on learning experiences that expose students to a wide array of medical professions and help students transition into internships and paid positions once they complete their pathway of choice. Students not only gain knowledge on campus, they also regularly visit our partnering institutions and work under supervision in real medical facilities. In our Mojave Marketing and Media Academy, students become experts in the areas of Sports and Entertainment Marketing and Video Production. The two programs work together to provide students with well-rounded learning opportunities through daily production of MojaveTV and authentic business simulations, among other things. We also offer additional specialty program pathways including Culinary Arts and Manufacturing Technologies (STEM Robotics). Our Culinary Arts program is uniquely positioned to build one of the only farm-to-table lab experiences in the District. Students will grow their own produce and herbs. In addition, our STEM Robotics students have access to high-level VEX robot kits, CAD systems, and 3D printers that give them the programming knowledge they need to transition into Manufacturing Technologies through our partnership with the newly formed Desert Rose Technical Center.*
